Turning Data Into Decisions

DATA ANALYSIS • INSIGHTS • IMPACT

MY STORY

FROM EDUCATION TO DATA-DRIVEN IMPACT

01

A PASSION FOR PATTERNS AND MEANINGFUL INSIGHTS

My journey in data analytics began from genuinely enjoying discovering patterns, solving problems, and transforming data into meaningful insights that support better decision-making.

02

EDUCATIONAL PSYCHOLOGY AND EDUCATION EXPERIENCE

My academic background in Educational Psychology and professional experience in education developed strong analytical thinking, attention to detail, and a structured approach to evaluating information. Working with reports, assessments, and performance tracking taught me the importance of accuracy and evidence-based decisions.

03

TRANSITION INTO DATA ANALYTICS AND BUSINESS INTELLIGENCE

Driven by a passion for data, I transitioned into data analytics and business intelligence. I work with Excel, Power Query, SQL, Python, and Power BI to clean, analyze, visualize, and communicate data in a way that helps transform complex information into clear business insights.

04

GROWING AS A JUNIOR DATA ANALYST

Today, I am focused on growing as a junior data analyst, continuously expanding my technical expertise while applying analytical thinking, curiosity, and discipline to every project. My goal is to help organizations make smarter, data-driven decisions through reliable analysis and impactful dashboards.

Educational Psychology
ACADEMIC FOUNDATION

Power BI & Tableau
DASHBOARDS

Python & SQL
DATA PIPELINES

“I turn raw, messy data into clear, decision-ready stories — bringing the same structured, quality-driven mindset from my teaching background into every dashboard I build.”

EDUCATION

ACADEMIC FOUNDATION SUPPORTING DATA-DRIVEN, RESEARCH-BASED THINKING.

Master's Degree Candidate, Educational Psychology
Cairo University
2024 – Present

Pre-Master's & Special Diploma, Educational Psychology
Cairo University | Grade: Very Good
2022 – 2023

Professional Diploma, Preparing E-Learning Materials
Helwan University | Grade: Very Good
2020

Bachelor of Education
Helwan University | Grade: Very Good
2019

TECHNICAL SKILLS & TOOLS

CORE TOOLS, METHODS, AND STRENGTHS I USE TO TURN DATA INTO ACTIONABLE INSIGHTS.

Power BI

Data modeling, dashboards, KPI reporting, DAX basics.

Excel

Formulas, XLOOKUP, pivot tables, Power Query, reporting.

SQL

Joins, aggregations, subqueries, data cleaning, transformation.

Python

Pandas, NumPy, Matplotlib basics, basic machine learning.

Data Analysis & Visualization

Dashboards, performance tracking, business insights.

Data Engineering & Modeling

ETL concepts, star schema, relationships, structured datasets.

Business Analysis

Requirements understanding, KPI definition, decision support.

Other Tools

PowerPoint, GitHub, Jupyter / notebooks.

KEY STRENGTHS

- Analytical Thinking
- Problem Solving
- Attention to Detail
- Data Storytelling
- Continuous Learning

Nedaa Algdawy
Data Analyst | Business Intelligence | Business Analysis

Turning Tools into Real Solutions

I combine technical tools and analytical thinking to clean, transform, analyze, and visualize data—turning complex information into actionnable business solutions.

Data Analytics Workflow

A structured approach I follow to turn raw data into meaningful and actionable insights.

01 Get Data
Collect data from various sources (databases, files, APIs, etc.).

02 Clean & Transform
Clean, merge, and reshape data to ensure quality and consistency.

03 Model & Analyze
Build data models, apply analytical techniques, and calculate key metrics.

04 Visualize & Report
Create interactive dashboards and clear visualizations to communicate insights.

05 Share Insights
Deliver actionable recommendations to support decision-making.

Core Tools & How I Use Them

DIFFERENT TOOLS. A COMMON GOAL — REAL BUSINESS IMPACT.

Power BI

- Build interactive dashboards and reports
- Data modeling and relationships
- Create DAX measures and KPIs
- Publish and share reports for business users

SQL

- Extract and query data from relational databases
- Clean and transform data using SQL queries
- Write joins and aggregations to combine data
- Create and use views and stored procedures

Excel

- Use Power Query for data cleaning and transformation
- Create Pivot Tables and Pivot Charts
- Apply advanced formulas (LOOKUP, IF, INDEX/MATCH, etc.)
- Build scenario analysis and reporting templates

Python

- Perform data analysis using pandas
- Create data visualizations with matploltiib and seaborn
- Build basic machine learning models
- Preprocess data and build prediction models

Other Key Skills

Complementary skills that enhance my analytical work and help deliver end-to-end solutions.

- Data Modeling
- DAX (Measures & KPIs)
- ETL (Data Pipelines)
- Data Governance
- Root Cause Analysis
- Business Problem Solving
- Communication & Storytelling

PROFESSIONAL EXPERIENCE & TRAINING

A JOURNEY SHAPED BY EDUCATION, CUSTOMER-FACING WORK, AND PRACTICAL DATA ANALYTICS TRAINING.

Data Analytics & Business Intelligence Intern
DiGiLiANS – Digital Pioneers Initiative | 2026

- Completed intensive hands-on training in SQL, Python, Power BI, and Excel.
- Developed practical skills in data cleaning, ETL, data modeling, KPI development, and dashboards.
- Collaborated on the Enterprise Banking Risk Management capstone project and translated findings into business insights.

English and Math Teacher
Egyptian Japanese School | 2023 – 2025

English Class Teacher
Privilage Language School | Previous Experience

Math Teacher & English Co-Teacher
Manarat El Maadi Language School | 2019 – 2022

Sales Agent & Customer Service
Telecom Egypt (WE) | Previous Experience

Call-Center Agent
ICC Account (Vodafone) | Previous Experience

> *My teaching and customer service experience strengthened my communication, **structured thinking**, reporting discipline, and attention to **detail** — all of which now support my work in data analytics.*

WHAT I CAN DELIVER

I HELP BUSINESSES TURN RAW DATA INTO CLEAR INSIGHTS, INTERACTIVE DASHBOARDS, AND DECISION-READY REPORTING.

01

Interactive Dashboards & KPI Reports

- Build interactive dashboards using Power BI and Tableau
- Transform data into clear KPIs and visual insights
- Design user-friendly, business-focused reports

02

Data Cleaning & Transformation

- Clean, merge, and structure raw data from multiple sources
- Handle missing values and inconsistencies
- Prepare analysis-ready datasets using Excel, Power Query, and Python

03

SQL Analysis & Structured Queries

- Write efficient and optimized SQL queries
- Extract and analyze data from relational databases
- Create complex queries to solve real business questions

04

Business Analysis & Insights

- Identify trends, patterns, and key opportunities
- Translate data into actionable business insights
- Support data-driven decision making with clear recommendations

05

Reporting & Presentation

- Create clear, professional reports and visualizations
- Summarize complex findings in simple, actionable language
- Tailor reports to different audiences (technical and non-technical)

06

Basic Predictive Analysis

- Apply basic statistical and predictive techniques using Python
- Build simple forecasting models (e.g., trend analysis, regression)
- Support data-driven planning and scenario analysis

The Value I Bring

Reliable and Detail-Oriented
I deliver accurate, high-quality work on time.

Business-Focused Mindset
I focus on insights that create real business value.

Clear Communication
I explain complex data in simple, meaningful terms.

Structured Problem Solving
I break down problems and find practical, data-driven solutions.

Continuous Learning
I stay curious and keep developing my skills.

Nedaa Algdawy | Data Analyst | Business Intelligence | Business Analysis

Enterprise Banking Risk Management

CREDIT RISK ANALYTICS, DEFAULT PREDICTION & EXPECTED CREDIT LOSS

An end-to-end analytics solution to monitor loan portfolio risk, analyze delinquency and default patterns, identify high-risk loans early, and support data-driven credit risk management decisions.

KEY RESULTS

- **30,000** Total Loans
- **22,000** Customers
- **EGP 26.86B** Total Loan Amount
- **8.57%** Default Rate
- **20.8%** Delinquency Rate

Business Problem

The bank needs a unified view of loan portfolio risk to identify delinquency and default early, improve collections, and support governance and risk monitoring.

Project Objectives

- Monitor portfolio risk and delinquency trends
- Identify high-risk loans and customers early
- Analyze collections and recoveries
- Build a predictive model for default (PD)
- Estimate potential credit losses (ECL)
- Support strategic decision-making

Data & Tools

- **SQL** — Bronze/Silver/Gold data processing & modeling
- **Power BI** — Data visualization & interactive dashboards
- **Python** — Machine learning (PD prediction)
- **Excel** — Data analysis & supporting tasks

Data Scope

- Post-origination loans data
- Payments, collections, delinquency, default, write-offs
- Customers, branches, loan products, and loan officers
- Period: multiple years (Egypt)

Regulatory Context

- Basel III compliance target: 01/01/2027
- IFRS 9 staging rules
- 30 days past due → Stage 2
- 90 days past due → Stage 3

Nedaa Algdawy | Data Analyst | Business Intelligence | Business Analysis

Power BI Dashboards

From portfolio overview to delinquency monitoring and collections performance, interactive dashboards provide a comprehensive view of credit risk.

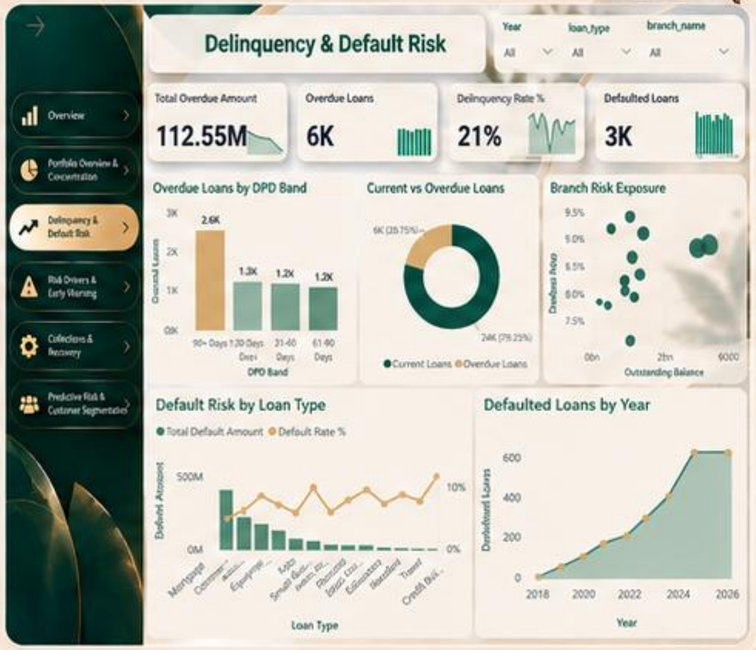

01 Portfolio Overview & Concentration

How large is the loan portfolio?
Which segments drive the exposure?

02 Delinquency & Default Risk

Who is delinquent? Where? Which loan type?
What is the size of risk?

03 Collections & Recovery

Does the bank collect dues efficiently
and reduce losses?

Nedaa Algdawy | Data Analyst | Business Intelligence | Business Analysis

Predictive Analytics & Business Impact

Machine learning models predict the probability of default (PD) and help segment customers by risk, enabling early intervention and better decision-making.

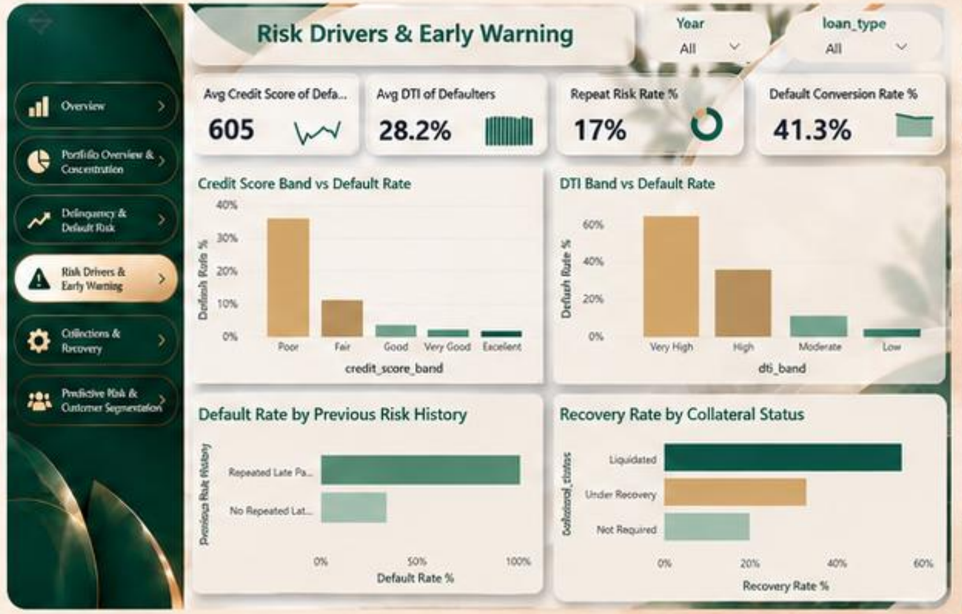

01 Predictive Risk & Customer Segmentation

Which customers are high risk?
How can we identify potential defaults early?

02 Risk Drivers & Early Warning

What are the main risk drivers?
Which customers need early attention?

4,202
High-Risk Loans

14.01%
High-Risk Share

31.65%
High-Risk Default Rate

Key Insights

- High-risk loans represent 14.01% of the portfolio.
- High-risk loans show a 31.65% default rate.
- Personal and auto loans show higher predicted PD.
- Early-warning analysis helps prioritize monitoring.

Business Impact & Recommendations

- Focus on high-risk customers for early follow-up.
- Improve collection strategies for delinquent loans.
- Use predictive models in regular risk monitoring.
- Support Basel III and IFRS 9 compliance.
- Reduce expected credit losses through proactive action.

Retail Sales Performance Analysis

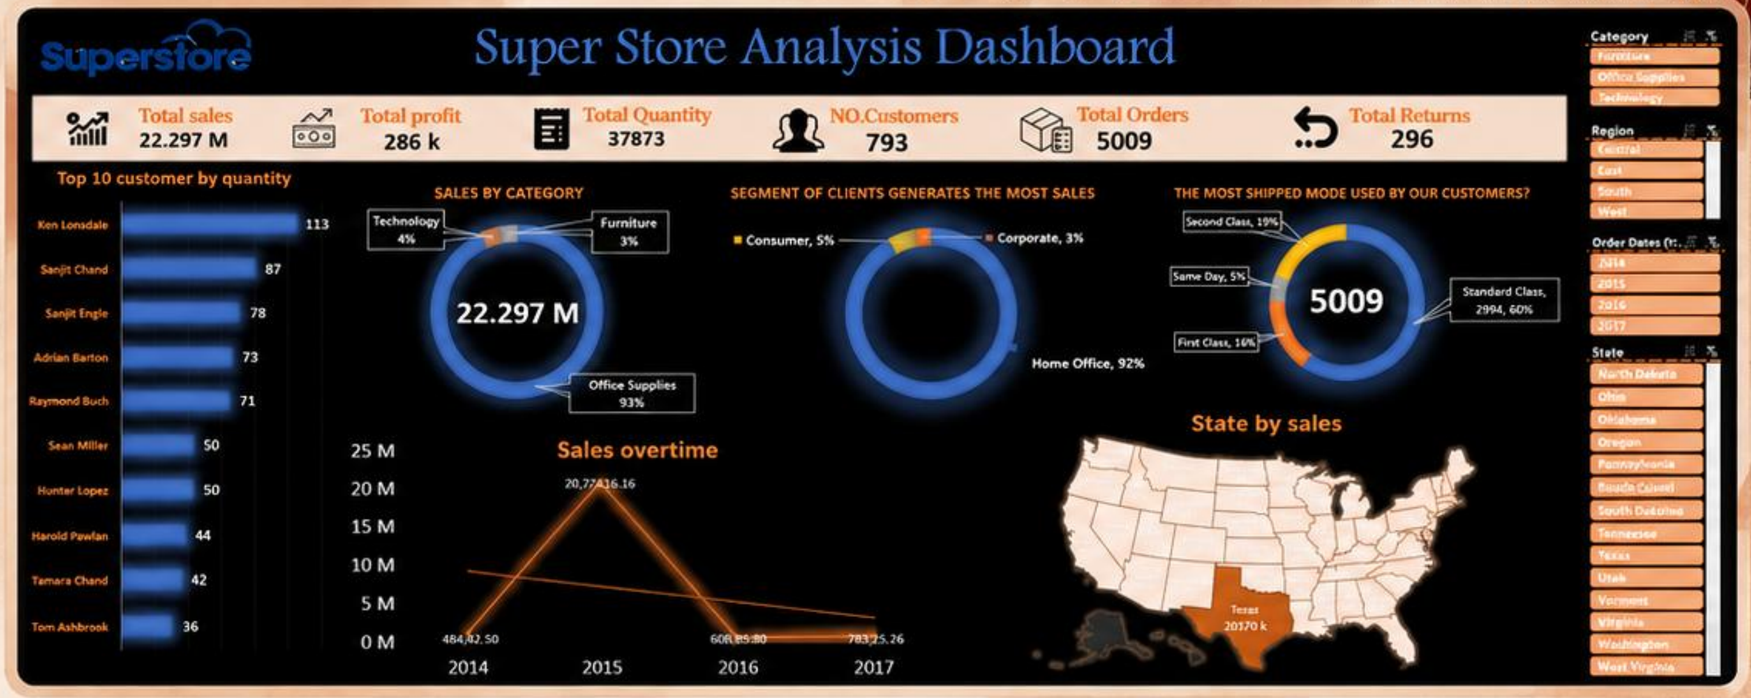

Superstore sales dashboard highlighting revenue, behavior, shipping patterns, and geographic performance.

01 Project Overview

This project analyzes superstore sales, profit, orders, customers, returns, and regional performance to support commercial decisions and identify growth opportunities.

02 Tools Used

- Power BI
- Excel

03 Key Metrics

Total Sales	22.297 M
Total Profit	286 K
Total Quantity	37,873
Customers	793
Total Orders	5,009
Total Returns	296

04 Key Insights

- Office Supplies dominates category sales (93%).
- Home Office is the largest customer segment (92%).
- Standard Class is the most used shipping mode (60%).
- 2015 shows the strongest sales spike.
- Texas stands out as the top state by sales.

05 Business Value

- Tracks sales, profit, and customer performance trends.
- Identifies high-value customer behavior and key segments.
- Highlights shipping preferences to improve fulfillment strategies.
- Supports regional sales targeting and growth opportunities.

Nedaa Algdawy
Data Analyst | Business Intelligence | Business Analysis

Superstore Project
Business Insights & Recommendations

I analyzed the Superstore dataset to uncover data quality issues, profitability drivers, and actionable recommendations to improve business performance.

Project Overview

Dataset:
Superstore Sample Retail Data

Period:
2014 – 2017

Objective:
Analyze sales, profit, discount behavior, and customer patterns.

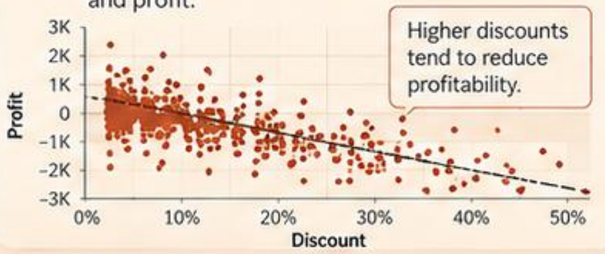

Data Quality Issue: Outliers

I identified 2 incorrect records with extremely high sales (around $10M each) and excluded them from the analysis to ensure accurate insights.

Discounts Impact Profitability

Heavy discounts above 20% often reduce profit margins and can lead to losses, showing a clear negative relationship between discount level and profit.

Key Metrics (Cleaned Data)

Total Sales	$2.30M
Total Profit	$286K
Profit Margin	12.47%
Total Customers	793

Top Loss-Making Products

	Product	Profit
1	Canon imageCLASS 2200	-$6,599
2	Hewlett Packard LaserJet 3310	-$5,397
3	Cubify CubeX 3D Printer	-$3,840
4	GBC DocuBind P400	-$3,421
5	Howard Miller 13-3/4" Wall Clock	-$2,517

Bottom Performing Cities

	City	Profit
1	Philadelphia, PA	-$13,837
2	Houston, TX	-$10,157
3	Chicago, IL	-$6,537
4	San Antonio, TX	-$5,729
5	New York, NY	-$5,638

Key Recommendations

Actionable steps to improve profitability and drive sustainable growth.

1. **Limit excessive discounts**
   Avoid high discounts (>20%) that erode margins.
2. **Focus on profitable categories**
   Prioritize high-performing categories (e.g., Office Supplies).
3. **Review loss-making products**
   Reassess, reprice, or discontinue consistently unprofitable items.
4. **Optimize pricing strategy**
   Use data-driven pricing based on demand and profitability.
5. **Improve low-performing locations**
   Investigate and address challenges in loss-making cities (e.g., Philadelphia, Houston).
6. **Target high-value customers**
   Focus on customer segments with higher lifetime value and stronger profitability.
7. **Monitor data quality**
   Implement regular data validation checks to identify and remove anomalies earl

Nedaa Algdawy | Data Analyst | Business Intelligence | Business Analysis

Coffee Shop Sales Analytics

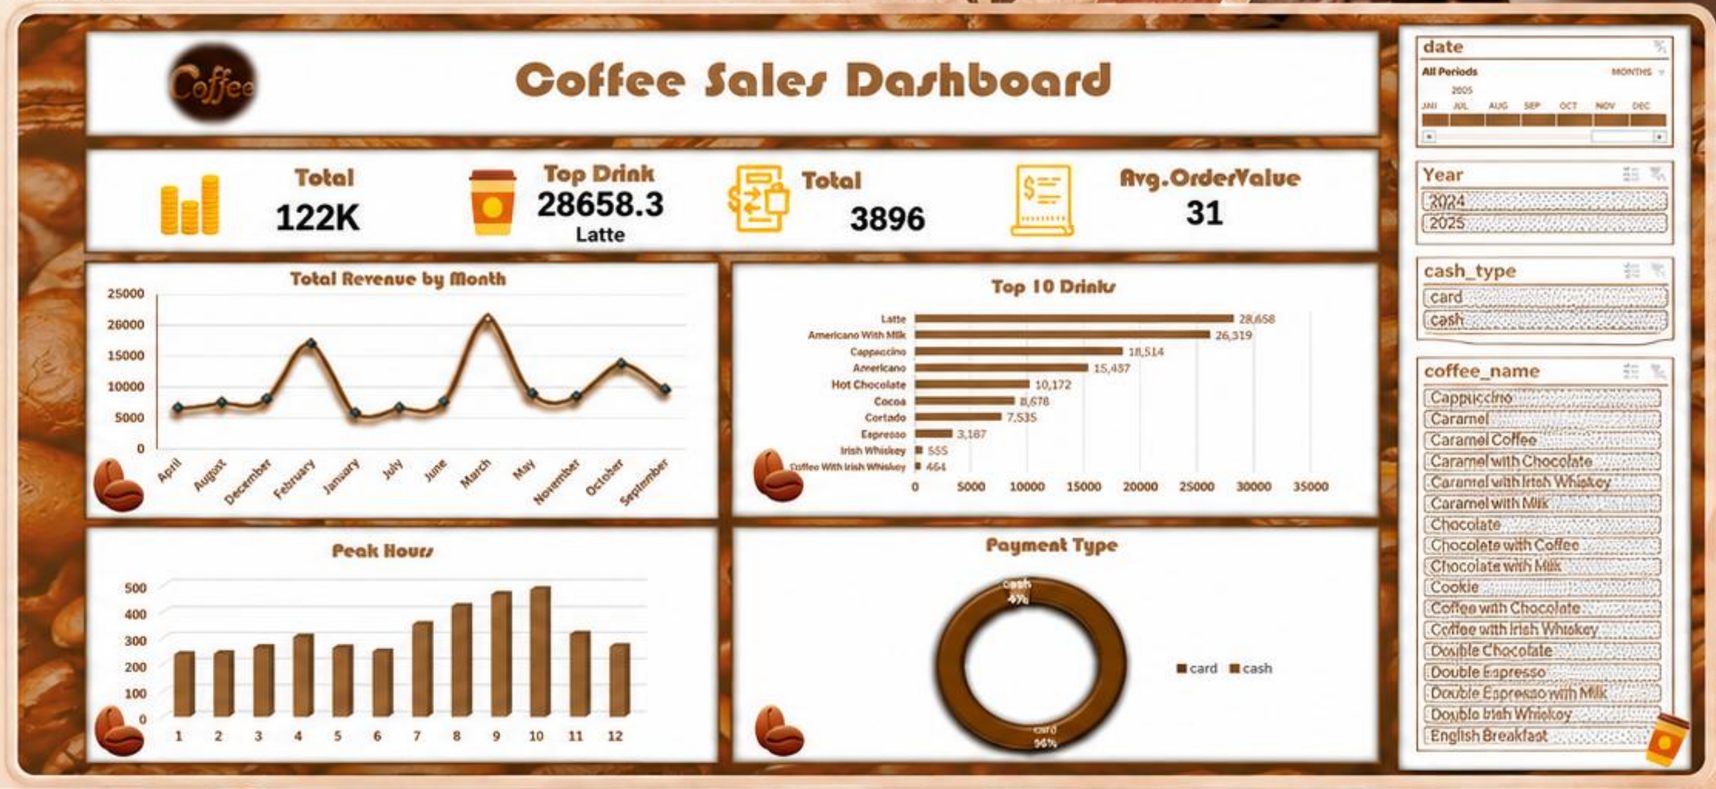

Excel dashboard highlighting revenue trends, top-selling drinks, peak sales hours, transaction volume, and payment behavior.

01 Project Overview

This project analyzes coffee shop sales performance to uncover revenue patterns, popular products, peak sales hours, payment preferences, and transaction behavior for better business decisions.

02 Tools Used

- Excel
- Power Query

03 Key Metrics

- Total Revenue: 122K
- Top Drink: 28,658.3 Latte
- Total Orders: 3,896
- Avg. Order Value: 31

04 Key Insights

- Latte is the top-selling drink.
- Revenue peaks strongly in March and also rises in October.
- Peak sales activity occurs around 10 AM.
- Card payments dominate over cash.

05 Business Value

- Identifies best-selling menu items for promotion and stocking.
- Supports scheduling decisions based on peak-hour demand.
- Helps track seasonal revenue patterns.
- Improves understanding of customer payment behavior.

From Data to Decisions

I follow a structured and collaborative approach to transform data into clear insights and actionable recommendations that solve real business problems.

01 Understand the Problem

- Discuss business goals and challenges
- Identify key questions and requirements

02 Prepare Data

- Collect and clean data
- Transform and model data (ETL process)
- Ensure data quality and consistency

03 Analyze & Explore

- Perform data analysis and exploration
- Identify patterns, trends, and risks
- Calculate key metrics (KPIs)

04 Build Dashboards

- Design interactive and user-friendly dashboards
- Apply best practices in data visualization
- Enable easy exploration and filtering

05 Deliver Insights

- Provide clear insights and actionable recommendations
- Support decision-making with data
- Present results to technical and non-technical audiences

Tools I Use

A combination of powerful tools to deliver end-to-end data solutions.

Power BI	Excel	SQL	Python	Data Modeling	DAX	Power Query
(Desktop & Service)	(Data Analysis & Reporting)	(Data Processing & Modeling)	(Data Analysis & Machine Learning)	(Star Schema)	(Basic)	(ETL)
